IMPACT ASSESSMENT METHOD + VERSION

LIFECYCLE IMPACT CATEGORIES

The environmental impacts listed below were assessed through the product's production phase (cradle to gate impacts).

| | ATMOSPHERE | | | WATER | | EARTH | |
|--------------|---|--|--|---|--|---|--|
| | | | | | | | |
| | Global Warming Potential refers to long-term changes in global weather patterns that are caused by increased concentrations of greenhouse gases in the atmosphere. | Ozone Depletion Potential is the destruction of the stratospheric ozone layer, which shields the earth from ultraviolet radiation that's harmful to life, caused by human-made air pollution. | Photochemical Ozone Creation Potential happens when sunlight reacts with hydrocarbons, nitrogen oxides, and volatile organic compounds, to produce air pollution known as smog. | Acidification Potential is the result of human-made emissions and refers to the decrease in pH and increase in acidity of oceans, lakes, rivers, and streams – polluting groundwater and harming aquatic life. | Eutrophication Potential occurs when excessive nutrients cause increased algae growth in lakes, blocking the underwater penetration of sunlight needed to produce oxygen and resulting in the loss of aquatic life. | Depletion of Abiotic Resources (Elements) refers to the reduction of available non-renewable resources, such as metals, that are found on the periodic table of elements, due to human activity. | Depletion of Abiotic Resources (Fossil Fuels) refers to the decreasing availability of non-renewable carbon-based compounds, such as oil and coal, due to human activity. |
| TRACI | kg CO ₂ -Equiv. | kg CFC 11-Equiv. | kg O ₃ -Equiv. | kg SO ₂ -Equiv. | kg N-Equiv. | kg Sb-Equiv. | MJ |
| CML | kg CO ₂ -Equiv. | kg R11-Equiv. | kg Ethene-Equiv. | kg SO ₂ -Equiv. | kg PO ₄ -Equiv. | kg Sb-Equiv. | MJ |
